Car Care Fairs Offer Free Vehicle Inspections

14 middle school and high school locations to offer free 30-point inspections by NAPA-certified technicians.

Denver, Colo. (April 26, 2006) – For four consecutive Saturdays from April 29 through May 20, motorists throughout the Denver metro-area will have the opportunity to receive free visual, vehicle inspections by NAPA-certified technicians at designated schools throughout the region.

The Regional Air Quality Council (RAQC), Colorado Select NAPA AutoCare Centers and several school districts have partnered to offer the vehicle inspections to help Front Range motorists keep vehicles running more efficiently and to improve Denver's air quality this summer by reducing ozone-causing emissions.

April is National Car Care Month and for four consecutive Saturdays from **Saturday, April 29 through Saturday May 20 from 9:00 a.m. to 2:00 p.m.**, motorists can visit one of 14 designated school locations in Front Range cities (see full list below), where NAPA-certified technicians will conduct a 30-point vehicle inspection checking belts and hoses, fluids, tire pressure and much more. In addition to free inspections, technicians will offer advice on improvements motorists can make to save money in long-term maintenance costs and improve the efficiency of their vehicles, including gas mileage. A well-maintained vehicle will cost less, run more efficiently, and help reduce ozone-causing emissions. Ground-level ozone can trigger respiratory and other health problems.

“Today, more and more motorists are aware that keeping their vehicles well-maintained makes sense not just for their pocketbooks but for our air quality as well. By keeping vehicles properly maintained, motorists can help take care of our summer air and curb summertime ozone pollution,” said Ken Lloyd, executive director of the RAQC.

At ground level, ozone is harmful to breathe in high concentrations. The elderly, young, and those with pre-existing respiratory conditions are particularly at risk from exposure to ozone, although healthy adults – who spend a lot of time exercising or working outdoors – may be affected by high ozone levels.

Ground-level ozone is formed when emissions from everyday items – such as local industry, gasoline-powered lawn equipment and vehicles, and household paints, stains, and solvents – react with other pollutants in the heat and sunlight. Ozone is most likely to form during the summer months on hot, sunny days. In Front Range cities, on-road mobile vehicles contribute about 15 percent of total volatile organic compounds (VOCs), one of the main ingredients to ozone formation. This represents almost 30 percent of total VOCs resulting from man-made sources.

“This is the sixth year we’ve conducted inspections at the Car Care Fairs and each year we are able to offer more locations along the Front Range where motorists can receive free vehicle inspections. NAPA AutoCare members look forward to participating in the Car Care Fairs again this year and helping Front Range motorists keep their cars running smoothly and cleanly,” said John Rush, president of the Colorado Select NAPA AutoCare Group.

For additional information on the Car Care Fairs, please visit www.OzoneAware.org or the RAQC’s Web site at www.raqc.org or call (303) 629-5450.
